CONCRETE BENCH 126 ER

1,146.00 €

The bench is made of high-performance reinforced fiber concrete and natural aggregate combined with the warmth of a certified wood. The structure is suitable for different color combinations and consists of natural marble or granite aggregates. The seating area is specially designed and does not allow water to be retained under the wooden elements. This engineering solution and protective coating on the wooden planks prolongs their life and prevents them from rotting. All concrete surfaces are polished and further treated, which makes the product even more resistant to aggressive weather conditions. A modern street bench that combines convenience and practicality for modern urban spaces.
